

# Environment

## Landscape and Visual Visualisations

Photomontage visualisations will be prepared to support the LVIA, with a selection of some of the key local views presented today. These demonstrate the current view from each location (The Baseline), and a photomontaged image containing the proposed wind turbines alongside those appearing already in the view (Photomontage: Proposed Development).

### Wirelines

Wireline diagrams are 3D simulations of a digital terrain model. Should you wish to see a wireline diagram of the Proposed Development from any particular view we would also be happy to show you this today using computer software.
