

# Climate Emergency

Moray Council also declared a 'climate and ecological emergency' in 2019, and formally adopted a Climate Change Strategy and Action Plan with the aim of the council being carbon neutral by 2030 and which, together with the Moray Local Development Plan, is designed to provide a co-ordinated and appropriate response to help deal with the challenges that climate change is expected to bring.

The proposed Edintore II Wind Farm would contribute to progress towards Scotland's climate change targets and specifically the decarbonisation of the electricity network by producing carbon-free electricity.

Based on a maximum installed capacity of up to 16.8MW the wind farm could displace approximately 520,000 tonnes of CO2 over its expected 25 year life time.
